

PRODUCT INFORMATION

W1000-CSG GLASS CLOTH

BENEFITS

Glass cloth W1000-CSG consists of 6-9 micron E-glass fiber strands, which are textured.

The W1000-CSG is inorganic, sterile, refractory, and contains no toxins or heavy metals and does not cause skin irritation.

The glass cloth has been CSG-coated. CSG-coating is a high-temperature impregnation, which makes it suitable for temperatures up to 700 °C – and very resistant to mechanical impact.

The treatment gives the cloth a good resistance to heat reflection and makes it suitable for insulation pads.

MATERIAL

- E-glass
- Glass cloth 1,070 g/m²
- CSG Coating

SPECIFICATION

Length	50 m
Thickness	2 mm
Temperature	700 °C
Color	Blue
Width	1,000 mm
Total weight	1,070 g/m ²

Application	Insulation, compensators
Flammability	Inflammable
Threads	5,0 x 3,2 / cm ²
Type of weave	Plain
Coating	CSG
